

Traffic Violation Management System

1. What is this project?

This is a **beginner-level SQL database project** that stores information about traffic violations.

For example, when a person violates a traffic rule, we can record:

- Who committed the violation
- Vehicle number
- Where it happened
- What rule was violated
- How much the fine is
- Whether it was a car or bike
- Whether the fine was paid

2. What is the purpose of the project?

The main purpose is to practice the SQL concepts you have learned on W3Schools.

- SELECT
- SELECT DISTINCT
- WHERE
- ORDER BY
- AND
- OR
- NOT
- INSERT INTO

The project gives you a realistic dataset where you can use all these commands.

Objective:

To store and analyze traffic violation records using SQL.
